

Djangify Content Blocks Cheat Sheet

All 26 blocks by their exact names, so you always know what to ask your AI assistant for.

There are two sets. The 19 free blocks give an article structure and make it easy to scan. The 7 premium blocks give the reader something to do. Use both sets in the same article.

Free blocks (19)

#	Name	Use it for
1	Key Takeaways / Summary Box	A summary of the whole article, at the top or the end
2	Contents List	Sections to jump to
3	Comparison Table	Rows and columns of facts
4	This vs That	Two options side by side
5	Two Lists	Two lists of bullets under one title
6	Facts Row	Three big numbers or short words
7	Callout	A tip, warning or single key point
8	Quote	A memorable sentence
9	Numbered Steps	Things to do in order
10	Checklist	Things to tick off (not saved)
11	Prompt Box	Text the reader should copy, with a Copy button
12	Before and After	An old version and a new version
13	FAQ	Questions and answers
14	Image Gallery	Several pictures
15	Video	A YouTube video
16	Link Row	Links to follow
17	Featured Articles	Other posts to read
18	Product Box	A product or offer
19	Note Stack	Short notes in a row, each its own shade

Premium interactive blocks (7)

#	Name	Use it for
1	Stats Bar	Reading time, length, last updated and level, at the top
2	Saved Checklist	Ticking things off, with progress saved on the reader's device
3	Guide Tracker	Steps in order, with a progress bar
4	Reflect and Write	The reader writes answers, then keeps, copies or prints them
5	Scorecard	The reader rates themselves and sees a result
6	Pick Your Path Quiz	A few questions that point to the right option
7	Switch	Choose a version (Windows or Mac, beginner or advanced) and see only that

Names that are easy to mix up

- **Key Takeaways** and **Summary Box** are the same block. Use Key Takeaways at the start and a Summary Box at the end.
- **Checklist** (free) is a plain list to tick. **Saved Checklist** (premium) remembers the ticks when the reader comes back.

Articles of 1,000 words or more

- Stats Bar at the top
- Contents List, with each entry linking to a heading
- Key Takeaways at the beginning
- Summary Box at the end

A few rules that save time

- Two or three blocks from each set is plenty. Do not stack several blocks on one screen.
- Every image needs descriptive alt text plus a width and a height.
- Premium blocks need a unique id on the block and on every item. Do not change an id once the page is live, because readers' saved progress is stored under it.
- The Stats Bar "Last updated" date is typed by hand, so update it when you edit the article.
- Do not put script, style, svg, input, button or form code in an article. Editors delete it when the page is saved. The premium blocks need only one script, added once to your whole site.
- Before you save a finished article in a visual editor, copy its HTML first: open the source or HTML view, select everything and copy it into a text file. Editors rewrite the whole page on every save, even when you only change a category, and they can delete tags they do not allow. If a block disappears, paste your copy back in.

About Djangify Content Blocks Premium

Turn your articles into pages your readers use, not just scroll past.

Djangify Content Blocks Premium is seven interactive blocks for any article, info page or sales page. A reader can tick off a checklist, work through a guide, write answers in a text box, score themselves, take a short quiz and pick the version that fits them. Their progress is saved on their own device, so it is still there when they come back.

Your AI assistant writes each block from one skill file, and you add one script once. The blocks follow your brand, work on Djangify and on any site that accepts HTML and lets you add one line of code to every page, and there is no plugin, no monthly fee and no tracking. You can use the pack on every site you own and on your clients' sites.

Check before you buy: you need access to your site's code or footer area. Some site builders only allow this on higher plans, and some do not allow it at all.
